

## INFORMATION SECURITY GROUP Course Specification 2013-14

<b>Code:</b>	IY5502	<b>Course Value:</b>	0.5	<b>Status:</b>	Core A / Core B
<b>Title:</b>	<b>Introduction to Cryptography and Security Mechanisms</b>			<b>Availability:</b>	Autumn term
<b>Prerequisites:</b>	None			<b>Recommended:</b>	None
<b>Co-ordinator:</b>	Keith Martin				
<b>Course Staff</b>	Keith Martin, Colin Walter, Michelle Kendall				
<b>Aims:</b>	<p>This course will</p> <ul style="list-style-type: none"> <li>• introduce the main types of cryptographic mechanism</li> <li>• explain how different cryptographic mechanisms provide different security services</li> <li>• identify some key issues relating to the management of these services</li> </ul>				
<b>Learning Outcomes:</b>	<p>Successful completion of the course will enable students to:</p> <ul style="list-style-type: none"> <li>• Explain exactly what cryptography can be used for.</li> <li>• Describe several basic cryptographic mechanisms for providing each of the core security services.</li> <li>• Appreciate the differences between various types of cryptographic mechanism and in which situations they are most usefully employed.</li> <li>• Identify the issues that need to be addressed when assessing what types of cryptographic mechanism are necessary to "secure" an application.</li> <li>• Identify the limitations of cryptography and how to support it within a full security architecture.</li> </ul>				
<b>Course Content:</b>	<p>This course is divided into three parts:</p> <ol style="list-style-type: none"> <li>1. Setting the scene: <ul style="list-style-type: none"> <li>• core security services provided by cryptography</li> <li>• basic model of a cipher system and use of cryptography</li> <li>• historical algorithms</li> <li>• security in theory and practice</li> </ul> </li> <li>2. Cryptographic Toolkit <ul style="list-style-type: none"> <li>• symmetric and public key encryption</li> <li>• data integrity</li> <li>• entity authentication</li> <li>• digital signatures</li> <li>• cryptographic protocols</li> </ul> </li> <li>3. Practical aspects <ul style="list-style-type: none"> <li>• key management</li> <li>• cryptographic applications</li> </ul> </li> </ol>				
<b>Teaching &amp; Learning Methods</b>	<ul style="list-style-type: none"> <li>• Eleven three-hour presentations with exercise sheets and handouts</li> <li>• Tutorials: weekly mathematics support tutorials; two small group tutorials; pre-examination tutorial</li> <li>• Moodle course space with forums and electronic resources</li> <li>• One laboratory session</li> <li>• Private study</li> </ul>				
<b>Key Bibliography:</b>	<p><b>Essential reading:</b> K. M. Martin, <i>Everyday Cryptography</i>, Oxford University Press (2012). <b>Highly recommended:</b> N. Ferguson, B. Schneier and T. Kohno, <b>Cryptography Engineering</b>, Wiley (2010).</p>				
<b>Formative Assessment and Feedback:</b>	Three sets of exercises containing exam-style questions are accepted for submission with feedback provided.				
<b>Summative Assessment:</b>	<p><b>Exam</b> 100(%) This course is assessed solely by written examination consisting of a two-hour-exam. <i>(1 compulsory question, 2 out of a further 4 questions)</i> <b>Coursework</b> 0(%) Coursework does not contribute to the final assessment for this course. <b>Deadlines:</b> The written examination will be held in the Summer term</p>
