

802.1x Configuration guide (Linux)

If you do not have Ubuntu you will need to download a program called [WPA Supplicant](#)

You will need to use the network manager in Ubuntu to connect to our wireless network. [This webpage](#) contains information on how to connect Ubuntu to wireless networks.

While configuring your wireless connection you may be asked for connection settings. We use the settings below:

Access control method: 802.1x

Encryption protocol: WPA Enterprise

Security protocol: TKIP

EAP type: PEAP

Authentication protocol: MSCHAPV2

Your username should be fully qualified e.g. [xpaa012@rhul.ac.uk](#)

Your password should be your University/email password
